Overview

RFID is a proximity (contactless) tag with a microprocessor (chip) and an antenna. It does not emit a signal by iitself - it uses radio waves of a specific frequency for identification (passive tag).

Application The RFID tag* allows access to defined capabilities by radio-frequency identification of a: • Specific person - Simply close the RFID tag to the terminal to access the data. This way don't have to enter your name and password every time you want to log in. This means data security and time saving; • Spiecific access code - You can use the RFID tag to mark specific goods or recipe ingredients in the database. This solution guarantees error-free formulation and reduces the procedure time. *RFID ISO/IEC 14443 Type A, 13,56 MHz

How to Use RFID Tag with ELLIPSIS Balances?

- 1. Click the Parameters field and then the Operators field.
 - 2. Add an operator and fill in your data.

- 3. Click the Card no. field and close the tag to the terminal.
 - 4. Click to confirm the settings.

Benefits In short, RFID technology ensures data security through 100% user identification and eliminates errors due to the "human factor". In addition, it optimizes work time and improves effciency, and above all, it offers endless possibilities.
