# Analog output module (HX7, HY10)

WX-016-0297

The drawings, photos and graphics used are for illustrative purposes only.

## Overview

The analog output module converts the scale output signal (mass) into an analog signal. The mass value is most often represented in the form of a 4-20 mA current signal. Due to the low resolution of the module (several thousand), such a signal is used in automation for processes that do not require high precision.

Analog output module is available in IM01.EX-2 communication module and for an extra charge in PUE HX7 and PUE HY10 terminals.
