The drawings, photos and graphics used are for illustrative purposes only.

Overview

Disposable pans for weighing dryers are used to accurately measure the weight of samples during the drying process. They minimise the risk of sample contamination, which is particularly important in laboratories and in the food, pharmaceutical and chemical industries.

[Disposable pans ø90 mm Designed for moisture analyzers, available as a set of 50 pieces](#)

Ease of use They are convenient and easy to use, eliminating the need to wash and dry the pans after each use, saving time and resources. **Precise measurement** Disposable pans are designed to provide accurate and repeatable results, which is crucial for precise analysis in weighing machines.

Residue elimination Disposable pans are discarded after use, eliminating the problem of residual samples

from previous measurements that can affect the results of subsequent analyses. Versatility They can be used for a variety of sample types, including solids, powders and liquids, making them a versatile tool in laboratories.
