The drawings, photos and graphics used are for illustrative purposes only.

Overview

The analog output module converts the scale output signal (mass) into an analog signal. The mass value is most often represented in the form of a 4-20 mA current signal. Due to the low resolution of the module (several thousand), such a signal is used in automation for processes that do not require high precision.

The analog output module is available for an extra charge in the PUE H315 terminals.

Compatible with (Additional Fee)

MediaBox

PUE H315 Weighing Terminal
