# IN/OUT module (PUE H315)

The drawings, photos and graphics used are for illustrative purposes only.

## Overview

IN/OUT module – semiconductor digital inputs/outputs which can take two binary states: “0” (inactive) or “1” (active). The input activation performs the assigned function of the scale, for example, zeroing, tare or process start. The output activation informs about the execution of the assigned function, for example, a certain weight threshold exceeding, scale stability or the process continuation.

The IN/OUT module comes for an extra charge in PUE H315 (4 IN/ 4 OUT).

## Compatible with

PUE H315 Weighing Terminal
